DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4, 6 and 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Davis et al (US Patent No. 5,818,585).

Davis et al discloses an optical spectral monitoring system comprising a broadband superluminescent light emitting diode source (column 1, lines 11-14), a tunable Fabry-Perot filter (column 3, lines 55-58), a package in which the SLED source and the tunable filter are installed (inherent), an optical bench (inherent), an isolator between the SLED source and the tunable filter (see Fig. 1, 25), the optical signal includes the 1250-1350nanometer wavelength range (inherent), the filter being installed orthogonally in the bench (see Fig. 1), and a detector that detects the filtered optical signal from the tunable filter (60).

Claim Rejections - 35 USC § 103

Art Unit: 2872

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis et al.

Regarding claim 5, Davis et al discloses the claimed invention as set forth above except that the finesse of the tunable filter is greater than 3000. It would have been obvious to one of ordinary skill in the art to have the finesse of the tunable filter that is greater than 3000, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Regarding claim 7, Davis et al discloses the claimed invention as set forth above except that the tunable filter is a MEMS Fabry-Perot filter. It would have been obvious to one of ordinary skill in the art to make the Fabry-Perot filter of

Art Unit: 2872

Davis et al to be MEMS Fabry-Perot filter for the purpose of obtaining precise control of the optical signal.
